## TO CHANGE THE CODE

1. Check the original code is working on the keypad.

2. Remove the keypad off the lock. To do this, slide the keypads and lock insides out of the case spine and unscrew the two screws fixing the keypad to the panel.

3. Turn the keypad over and remove the 4 screws.

4. Lift off the covering panel carefully as there are 10 springs attached to this panel. Note that the red tumblers relate to the code shown above. Also note that the C tumbler is has no colour and should not be removed.

5. To change the code hold the keypad with the code buttons down and depress & hold the C button (if this is not done you may damage some of the internal components). Reposition the tumblers to the new code (red tumblers are coded and blue tumblers are uncoded). Ensure that the square cut-out on each tumbler is facing the outside of the lock body, also ensure that the coloured mark is facing upwards. If any one tumbler is upside down or the wrong way round the lock will not work and if forced will break the internal components. The code must always start with a 'C'.

6. Replace the covering panel and tighten the 2 screws

7. The code is now changed, check to see that it is working correctly and make a note of the code for future reference. Once satisfied that the lock is working correctly refit keypads to the panel using the 2 screws and reassemble the lock.
